EXAMINER

THOMAS, COURTNEY D

ART UNIT

PAPER NUMBER

2882

DATE MAILED: 03/25/2003

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)
	09/965,929	BYREN ET AL.
	Examiner	Art Unit
	Courtney Thomas	2882

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

1) Responsive to communication(s) filed on 28 September 2001.

2a) This action is **FINAL**. 2b) This action is non-final.

3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4) Claim(s) 1-21 is/are pending in the application.

4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5) Claim(s) _____ is/are allowed.

6) Claim(s) 1-21 is/are rejected.

7) Claim(s) _____ is/are objected to.

8) Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9) The specification is objected to by the Examiner.

10) The drawing(s) filed on 28 September 2001 is/are: a) accepted or b) objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

11) The proposed drawing correction filed on _____ is: a) approved b) disapproved by the Examiner.
If approved, corrected drawings are required in reply to this Office action.

12) The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

a) All b) Some * c) None of:

1. Certified copies of the priority documents have been received.
2. Certified copies of the priority documents have been received in Application No. _____.
3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).

a) The translation of the foreign language provisional application has been received.

15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

1) Notice of References Cited (PTO-892) 4) Interview Summary (PTO-413) Paper No(s). _____
2) Notice of Draftsperson's Patent Drawing Review (PTO-948) 5) Notice of Informal Patent Application (PTO-152)
3) Information Disclosure Statement(s) (PTO-1449) Paper No(s). _____ 6) Other: _____

DETAILED ACTION

Information Disclosure Statement

1. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

3. The abstract of the disclosure is objected to because it exceeds the 150-word limit.

Correction is required. See MPEP § 608.01(b).

4. The disclosure is objected to because of the following informalities:

5. The reference to U.S. Patent Application by Byren and Trafton entitled "System and method for effecting high power beam control with adaptive optics in low power beam path" (Atty. Docket PD 00W089 – see p. 4, lines 20-23) needs to be updated to include the serial number and filing date.

6. The reference to "patent" (Atty. Docket PD 00W089) p. 10, lines 12-14; is misleading, since the referenced patent application has not been issued.
7. Appropriate correction is required.

Claim Objections

8. Claim 20 is objected to because of the following informalities:
9. Claim 20 recites (p. 21, line 8) ... "a source of a reference beam adapted illuminate said phased array ..." Examiner notes that the word "to" should be inserted, so that the line reads: a source of a reference beam adapted to illuminate said phased array ...".
10. Appropriate correction is required.

Claim Rejections - 35 USC § 102

11. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

12. Claims 1-4, 7,8 and 21 are rejected under 35 U.S.C. 102(b) as being anticipated by Applicant's Admitted Prior Art (herein referred to as AAPA).
13. As per claims 1 and 21, AAPA discloses an apparatus (100) (and method) comprising a means (108) for providing a first beam of electromagnetic energy (135); a second means (146) for sampling the first beam and providing a second beam (137) in response thereto; a third means (136) for detecting aberrations in the second beam (137); and a fourth means responsive to the detected aberrations, for correcting aberrations in the first beam (see Fig. 1 - Prior Art; specification: p.8, lines 10-32, p. 9, lines 1-23).

14. As per claims 2-4, AAPA discloses an apparatus wherein the first means is a telescope and includes a primary mirror (see Fig. 1 - Prior Art).

15. As per claims 7 and 8, AAPA discloses an apparatus wherein fourth means includes means for generating a phase conjugate laser beam as the first beam and wherein third means is a wave-front sensor adapted to detect aberrations in the second beam and to provide a first signal error in response thereto (see Fig. 1 - Prior Art; specification: p.8, lines 10-32, p. 9, lines 1-23).

Claim Rejections - 35 USC § 103

16. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

17. Claims 5, 6 and 9-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Admitted Prior Art (herein referred to as AAPA).

18. As per claims 5 and 6, AAPA does not explicitly disclose an apparatus comprising a holographic element disposed on a surface of the primary mirror.

19. It would have been obvious to modify the apparatus of AAPA such that it incorporated a holographic element disposed on a surface of the primary mirror. One would have been motivated to make such a modification based on the conventional understanding that holographic optical elements are useful in defining and implementing the interconnection patterns between sources and detectors. An additional benefit of using holographic optical elements rather than electrical connections, optical fibers or conventional mirrors is that HOEs allow greater freedom in designing optical system interconnections and enable the conversion of a single beam into

separate beams of uniform energy and specific shape. The use of these optical elements is noted for their high conversion efficiency, which in turn lowers system power requirements and operation costs.

20. As per claims 9-20, AAPA does not explicitly disclose an apparatus comprising processing means, optical phase arrays and means for phase conjugation.

21. It would have been obvious to modify the apparatus of AAPA such that it incorporated the aforementioned elements. One would have been motivated to make such a modification so that the apparatus is provided with means for receiving and manipulating system information to be used for automatic adjustments in response to the processed data. Such a system would not require manual manipulation of elements for recalibration. Additionally, it would have been obvious to incorporate optical phase arrays and means for phase conjugation, since it is commonly understood that optical phase arrays assist in the steering of radiation and alignment with corresponding elements in an optical system. A benefit of such a modification is that it ensures the propagation of radiation such that loss is minimized between interconnects. It would have been obvious to further incorporate optical phase conjugation means for the purpose of unraveling distortions that occur as radiation propagates through a distorting medium, thereby increasing the efficiency of the system and minimizing the need for amplifying means to enhance detection of radiation.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Courtney Thomas whose telephone number is (703) 306-0473. The examiner can normally be reached on M - F (9 am - 5 pm).

Art Unit: 2882

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Kim can be reached on (703) 305 3492. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9318 for regular communications and (703) 872-9319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0530.

Courtney Thomas
